Artisan Technology Group is your source for quality new and certified-used/pre-owned equipment

- FAST SHIPPING AND DELIVERY
- TENS OF THOUSANDS OF IN-STOCK ITEMS
- EQUIPMENT DEMOS
- HUNDREDS OF MANUFACTURERS SUPPORTED
- LEASING/MONTHLY RENTALS
- ITAR CERTIFIED

Service Center Repairs
Experienced engineers and technicians on staff at our full-service, in-house repair center

IntraView™ Remote Inspection
Remotely inspect equipment before purchasing with our interactive website at www.Instraview.com

We Buy Used Equipment
Sell your excess, underutilized, and idle used equipment. We also offer credit for buy-backs and trade-ins www.artisantg.com/WeBuyEquipment

Displaytech’s electronic drivers are designed specifically for driving Ferroelectric Liquid Crystal shutters and polarization rotators. The output waveform has been carefully optimized to yield the fastest possible FLC transition time while maintaining maximum FLC life. Sufficient drive current is available to allow simultaneous operation of several large FLC devices with a combined area of up to 10 cm².

Displaytech offers two FLC Driver models: the DR50 and DR95. The DR95 is a low cost TTL/CMOS controlled FLC Driver. It is used in conjunction with external signal sources and lab generators to form precision FLC drive pulses synchronized to an external logic level or analog signal.

The extended range Schmitt trigger circuitry makes it possible to use the DR95 with a variety of signal sources including standard 5 V TTL CMOS, 6-15V CMOS, and analog signals with a ±20 V maximum range.

Displaytech’s DR95 FLC Driver output amplifier uses high-speed MOSFET devices and a pair of precision voltage references to achieve a high degree of symmetry, balance, and accuracy over time and temperature ranges. It is capable of producing over one Amp of drive current and its output is short circuit protected.

The DR95 FLC Driver may be powered from 105 - 135 VAC at 50 - 60 Hz or from 210 - 270 VAC at 50 - 60 Hz and features a standard I.E.C. detachable power cord.

**Features**

- Low cost
- Optimized waveform for FLC devices
- TTL/CMOS drive and gate input
- 20 minute standby power down
- Gate input for disabling the drive signal
- Compact design
- Requires an external signal source

**Corresponding FLC Drive Waveform**
