High-end Line Filter for Machinery/Equipment

<table>
<thead>
<tr>
<th>Features and benefits</th>
</tr>
</thead>
<tbody>
<tr>
<td>A compact and light weight filter design with a „cubic“ shape, requiring minimum mounting space and thus taking the constructional conditions on the mains input of machinery into account</td>
</tr>
<tr>
<td>Simple and time-saving installation with good accessibility for automatic and hand tools</td>
</tr>
<tr>
<td>Solid, touch-safe terminal blocks (8 to 200 A types) offering sufficient contacting cross section according to the EN 60204-1 installation standard, which is very common in industrial applications</td>
</tr>
<tr>
<td>As a mains input filter for three phases and neutral line, FN 3280 provides enough performance to ensure EMC compliance of machinery in mixed (Class A) or even domestic (Class B) environments. Further, its use will also increase the immunity of the entire installation significantly</td>
</tr>
<tr>
<td>FN 3280 provides the attenuation performance needed to meet the requirements of various machine tools with up to 12 driving axes and ~10 to 20 m of motor cable each</td>
</tr>
<tr>
<td>For easy selection and application, the filter current ratings are aligned with common fuse values</td>
</tr>

### Typical applications

Mainly industrial equipment, machinery, machine tools and diverse process automation systems with three-phase and neutral electricity supply. Due to the outstanding attenuation performance, FN 3280 is also the first choice for noisy power supplies, renewable energy applications, highpower office equipment and further three-phase and neutral devices. Because of the relatively low leakage current, FN 3280 may even be used for some medical devices.

* Maximum leakage under normal operating conditions, based on the assumption that all three phases and the neutral conductor are connected to the supply and the consumer. In this case, the current will mainly return through the neutral line, not as earth leakage.
